Prologue

This report contains 6 records, observed from 2026-07-21 to 2026-07-26. Its purpose is to provide a public, reproducible and methodologically traceable reading of controlled InfinityAtlas data for San Cristobal. It is a controlled public demonstration: it is not a clinical diagnosis, does not independently verify a territorial event and does not present scores as real emergencies.

Report purpose

Organize each authorized record, its public traceability, methodological components and permitted location for prototype review and demonstration.

Executive summary

This aggregate reading contains 6 records authorized for the InfinityAtlas public surface. It summarizes methodological review, provenance and demonstration priority without exposing evidence, actors, comments or restricted coordinates.

Records included

6

Predominant category

Heat

Predominant risk level

Moderate

Predominant data provenance

Controlled test

Interpretive note

Predominance means the group with the largest record count inside this controlled selection. It does not demonstrate causality, clinical severity or territorial representativeness.

Record 1

Controlled water route observation

Public traceability: ID #101 · InfinityAtlas public No. 1

Category	Review status	Score / level	Data provenance
Water	Pending	7 · Moderate	Controlled test

Methodological components

Hazard	Exposure	Vulnerability
2	3	2

Date: 2026-07-21 · Public location mode: Approximate

Territorial interpretation of the record

This record documents a demonstrative Water observation in San Cristobal · Galapagos · Ecuador, dated 2026-07-21. The score of 7 (Moderate) is obtained from Hazard 2 + Exposure 3 + Vulnerability 2. Its provenance is Controlled test. The record remains pending methodological review by an authorized person. The public location mode is Approximate and represents only the authorized precision. This reading supports record review and does not express causality, diagnosis or territorial emergency.

These signals organize review attention inside the demonstration. They are not clinical alerts or real territorial emergencies.

Record 2

Controlled heat exposure review

Public traceability: ID #102 · InfinityAtlas public No. 2

Category	Review status	Score / level	Data provenance
Heat	Validated	11 · Critical	Controlled test

Methodological components

Hazard	Exposure	Vulnerability
4	4	3

Date: 2026-07-22 · Public location mode: Approximate

Territorial interpretation of the record

This record documents a demonstrative Heat observation in San Cristobal · Galapagos · Ecuador, dated 2026-07-22. The score of 11 (Critical) is obtained from Hazard 4 + Exposure 4 + Vulnerability 3. Its provenance is Controlled test. The record was considered methodologically complete; this status does not independently confirm that the event occurred. The public location mode is Approximate and represents only the authorized precision. This reading supports record review and does not express causality, diagnosis or territorial emergency.

These signals organize review attention inside the demonstration. They are not clinical alerts or real territorial emergencies.

Record 3

Controlled waste handling observation

Public traceability: ID #103 · InfinityAtlas public No. 3

Category	Review status	Score / level	Data provenance
Waste	Observed	8 · Moderate	Controlled test

Methodological components

Hazard	Exposure	Vulnerability
3	3	2

Date: 2026-07-23 · Public location mode: Approximate

Territorial interpretation of the record

This record documents a demonstrative Waste observation in San Cristobal · Galapagos · Ecuador, dated 2026-07-23. The score of 8 (Moderate) is obtained from Hazard 3 + Exposure 3 + Vulnerability 2. Its provenance is Controlled test. The record requires clarification, correction or additional evidence before a later methodological decision. The public location mode is Approximate and represents only the authorized precision. This reading supports record review and does not express causality, diagnosis or territorial emergency.

These signals organize review attention inside the demonstration. They are not clinical alerts or real territorial emergencies.

Record 4

Synthetic environmental marker

Public traceability: ID #104 · InfinityAtlas public No. 4

Category	Review status	Score / level	Data provenance
Environmental pollution	Rejected	5 · Low	Synthetic demo

Methodological components

Hazard	Exposure	Vulnerability
2	1	2

Date: 2026-07-24 · Public location mode: Hidden

Territorial interpretation of the record

This record documents a demonstrative Environmental pollution observation in San Cristobal · Galapagos · Ecuador, dated 2026-07-24. The score of 5 (Low) is obtained from Hazard 2 + Exposure 1 + Vulnerability 2. Its provenance is Synthetic demo. The record did not meet the minimum quality or evidence requirements for validation. The public location is hidden and the report does not reconstruct its coordinates. This reading supports record review and does not express causality, diagnosis or territorial emergency.

These signals organize review attention inside the demonstration. They are not clinical alerts or real territorial emergencies.

Record 5

Public climate context reference

Public traceability: ID #105 · InfinityAtlas public No. 5

Category	Review status	Score / level	Data provenance
Heat	Validated	6 · Moderate	Public real data

Methodological components

Hazard	Exposure	Vulnerability
2	2	2

Date: 2026-07-25 · Public location mode: Aggregate

Territorial interpretation of the record

This record documents a demonstrative Heat observation in San Cristobal · Galapagos · Ecuador, dated 2026-07-25. The score of 6 (Moderate) is obtained from Hazard 2 + Exposure 2 + Vulnerability 2. Its provenance is Public real data. The record was considered methodologically complete; this status does not independently confirm that the event occurred. The public location mode is Aggregate and represents only the authorized precision. This reading supports record review and does not express causality, diagnosis or territorial emergency.

These signals organize review attention inside the demonstration. They are not clinical alerts or real territorial emergencies.

Record 6

Controlled heat route follow-up

Public traceability: ID #106 · InfinityAtlas public No. 6

Category	Review status	Score / level	Data provenance
Heat	Pending	9 · High	Controlled test

Methodological components

Hazard	Exposure	Vulnerability
3	3	3

Date: 2026-07-26 · Public location mode: Approximate

Territorial interpretation of the record

This record documents a demonstrative Heat observation in San Cristobal · Galapagos · Ecuador, dated 2026-07-26. The score of 9 (High) is obtained from Hazard 3 + Exposure 3 + Vulnerability 3. Its provenance is Controlled test. The record remains pending methodological review by an authorized person. The public location mode is Approximate and represents only the authorized precision. This reading supports record review and does not express causality, diagnosis or territorial emergency.

These signals organize review attention inside the demonstration. They are not clinical alerts or real territorial emergencies.

Territorial map of permitted public locations

Non-navigational public representation. It uses only authorized coordinates and omits hidden locations. Nearby symbols may be displaced slightly and retain a leader line to the authorized location.

Territorial representation with geoprivacy

Non-navigational public representation. It uses only authorized coordinates and omits hidden locations. Nearby symbols may be displaced slightly and retain a leader line to the authorized location.

Methodology and traceability

Risk Score = Hazard + Exposure + Vulnerability. Each component uses a 1 to 4 scale. Version climate-health-risk-v0.1. The result is methodological, not clinical.

Geographic privacy

Each record applies a public location mode: exact, approximate, aggregate or hidden. The report does not reconstruct restricted coordinates.

Suggested methodological next steps

Review the declared source, authorized evidence, location mode, observation date and methodological classification before any future publication authorization.

Licenses and attribution

Climate: Open-Meteo, CC BY 4.0. Public database: Cloudflare D1. Prototype software: public repository under MIT, with an express exclusion for the InfinityAtlas brand and logo. InfinityAtlas and its logo belong to INFINITYGAIA S.A.S. B.I.C.

Limitations and responsible reading

All records are clearly labeled as public real context, controlled tests or synthetic demos. High or critical scores are not real emergencies. This report does not independently verify territorial events, is not a medical diagnosis and does not claim UNICEF selection, funding, partnership or endorsement.
