Map / Mapa

A live geoprivacy-aware map is available in the application. A static tile image is intentionally omitted from this reproducible server report.

Methodology

Risk Score = Hazard + Exposure + Vulnerability. Each component ranges from 1 to 4. This is a transparent methodological prioritization score, not a clinical diagnosis and not independent verification that a territorial event occurred.

Limitations

Controlled tests and synthetic demonstrations are clearly labeled and must not be interpreted as validated territorial events. Public outputs omit actors, internal comments, restricted evidence, credentials and exact locations unless an explicit public exact-location mode is authorized.
