Climate & Health MRV Toolkit

Territorial intelligence, traceability and trusted impact data.

Interpretive territorial climate and health report

San Cristobal · Galapagos · Ecuador

FILTERED REPORT · 1 record

Consulted period

2026-07-22 / 2026-07-22

Generated at UTC

2026-07-30 00:55

Report identifier

IA-PUBLIC-20260730005531

Controlled public source: Cloudflare D1

This filtered selection contains 1 record authorized for the InfinityAtlas public surface. It summarizes methodological review, provenance and demonstration priority without exposing evidence, actors, comments or restricted coordinates.

CONTROLLED PROTOTYPE · NOT A VALIDATED FIELD PILOT

These signals organize review attention inside the demonstration. They are not clinical alerts or real territorial emergencies.

Executive summary

This filtered selection contains 1 record authorized for the InfinityAtlas public surface. It summarizes methodological review, provenance and demonstration priority without exposing evidence, actors, comments or restricted coordinates.

Executive reading of the selection

Record 2 — Technical ID 102 · San Cristobal · Galapagos · Ecuador · Heat · 2026-07-22 · Validated · 11 · Critical · Controlled test. It is a controlled demonstration record and does not constitute a diagnosis, causality statement or territorial emergency.

Complementary climate context

The provider observation time and report generation time are preserved separately. This context is not an official meteorological report.

Temperature

25.1 °C

Humidity

82%

Apparent temperature

28.3 °C

Precipitation

0 mm

Observed by Open-Meteo: 2026-07-29T18:45

Methodological priority signals

These signals organize review attention inside the demonstration. They are not clinical alerts or real territorial emergencies.

Risk level

Territorial representation with geoprivacy

Non-navigational public representation. It uses only authorized coordinates and omits hidden locations.

Methodology and traceability

Risk Score = Hazard + Exposure + Vulnerability. Each component uses a 1 to 4 scale. Version climate-health-risk-v0.1. The result is methodological, not clinical.

Geographic privacy

Each record applies an exact public, approximate, aggregate or hidden location mode. The report does not reconstruct restricted coordinates.

Suggested methodological next steps

Review the declared source, authorized evidence, location mode, observation date and methodological classification before any future publication authorization.

Licenses and attribution

Climate: Open-Meteo, CC BY 4.0. Public database: Cloudflare D1. Prototype software: public repository under MIT, with an express exclusion for the InfinityAtlas brand and logo. InfinityAtlas and its logo belong to INFINITYGAIA S.A.S. B.I.C.

Limitations and responsible reading

All records are clearly labeled as public real context, controlled tests or synthetic demos. High or critical scores are not real emergencies. This report does not independently verify territorial events, is not a medical diagnosis and does not claim UNICEF selection, funding, partnership or endorsement.
